Launch

October 1, 2026

Platforms

iPhone + iPad

Language

English at launch

WHAT TO TRY

01 START WITH THE ACCOUNTS	Open an account and look at how site information is organized around the customer. FireVault Pro is designed to make information from earlier visits useful when a technician returns.
02 SAVE IMPORTANT SITE LOCATIONS	Explore the ability to retain locations such as the fire alarm panel, riser, entrance and technician parking. These details stay associated with the account.
03 CAPTURE FIELD INFORMATION	Add or review notes, photos and scanned documents. The goal is to keep the information technicians collect during service work together instead of scattered across separate apps.
04 EXPLORE TRIP LOG	The GPS Trip Log documents the workday and supports reports and route history. Automatic field media backup helps preserve photos and scans collected in the field.
05 LOOK BEYOND THE PHONE	FireVault Pro extends across iPhone and iPad, includes CarPlay capabilities for appropriate driving-related workflows, and connects to a companion web portal for account access away from the field.
